

ROTARY VALVE “BUILT TO LAST”

This is a view of a Rotary Valve being assembled at Young Industries facility in Muncy, PA. The Valve as shown in the photo has the end plate removed, exposing the rotor, rotor shaft and housing. This is Size 6” Model HC Drop-Through Rotary Valve. It is designed for 50 PSIG internal pressure at an operating temperature of 900 degrees F.

Take note to the thickness of the valve body, and size of the rotor shaft. This Rotary Valve is built to last many years of tough service. Young Industries has a wide range of Rotary Valves to meet the most demanding applications. Valve sizes start from Size 1” and can be designed and manufactured as large as needed. Young Industries is an ASME code shop and we have the application knowledge and manufacturing expertise to manufacture custom valves.

So, when the need arises for a quality/long life Rotary Valve contact Young Industries and we are happy to work with you.
