

PRODUCT LINE REPORT

TRANSFLOW FLUIDIZING PADS NOW STOCKING TWO SIZES

**ADVANCED
TECHNOLOGY
PROVEN DESIGN**

Young Industries Transflow Fluidizing Pads are used in applications where bridging and unreliable flow of powders create problems in existing hoppers, bins or downspouts. Initially we decided to stock 3.75" x 7" Transflow Pads so we could offer customers quick delivery and a cost effective solution.

We have now expanded our line of standard-stock pads to offer 4" x 12" Transflow pads. These pads have 80% more fluidization area than our smaller 3.75" x 7" pad.

The Transflow media is 316LS/S and the backing plate is 304S/S construction. Transflow is constructed to eliminate powder from infiltrating the media, and fluidizes and conditions fine powders easily.

Our Transflow Pads can be used in hoppers, bins, or downspouts to fluidize and condition powders. A cost effective solution to solve powder flow problems.

YOUNG INDUSTRIES TRANSFLOW PADS ARE **GUARANTEED FOR LIFE**. Based on our extensive background in using Transflow for the finest powders, we can offer this guarantee. Our Transflow pads offer trouble free operation, are easy to install, and have the **LIFETIME GUARANTEE**.

3.75" x 7" and 4" x 12" Transflow pads are normally in stock and available for immediate shipment.
