TRANSVAIR AERO-MECHANICAL CONVEYOR “ON-SITE” TESTING

**ADVANCED
TECHNOLOGY
PROVEN DESIGN**

Young Industries maintains a variety of Transvaire Aero-Mechanical Conveyors at our test facility in Muncy PA. For the convenience of our customers and those occasions when we cannot test at our facility, Young Industries offers Conveyors for “On-Site” testing.

The unit shown is a Size 3” Straight Line unit that is 8 ft. long and conveys vertically. This conveyor is convenient for shipping and handling and when tested will demonstrate the versatility of the conveyor for handling powders.

The Transvaire Aero Mechanical Conveyor is manufactured in 304S/S and has a small inlet dump hopper. It has a grating (not shown in photo) that makes it easy for dumping paper bags or boxes of product into the hopper. The unit has a shaft mounted drive with TEFC motor and is complete with motor starter.

When needed, we provide the service of an Application Engineer to assist with the “On-Site” conveyor testing. Contact Young Industries to make arrangements for testing.
